

*“Securing A World Without Downtime”*

## **ZeroNines® Technology, Inc. partners with Sequiam Corporation to provide trusted email connection for World Olympians Association**

**Castle Rock, CO, November 15, 2005** - ZeroNines Technology, Inc, a provider of information security and high availability solutions, announced today it has reached a definitive agreement with Sequiam Corporation; a resource partner to the World Olympians Association and the exclusive provider of “OLYMPIAN INSIGHT,” the secure electronic news communication for all Olympians worldwide. Sequiam provides Olympians with worldwide personal secure email services.

Alan Gin, CEO of ZeroNines commented, “Our relationship with Sequiam has truly been a collaborative technical effort providing secure and always available applications that benefit the World Olympian Association. We completed benchmarks for 100,000 users averaging upwards of 200 transactions per minute and allow only authorized, trusted connections to the WOA servers.”

Nicholas VandenBrekkel, Sequiam’ CEO, commented “At Sequiam we are all about security and convenience. ZeroNines has created a technology that allows us to have a worry free relationship with the World Olympians Association where it pertains to the flow of electronic information, thereby allowing us to focus on biometric access security at Olympic events. As our Fortune 500 client list grows we see an increasing need to protect and uphold critical information flow and ZeroNines has the right technology. I look forward to working with Alan Gin and his capable team to implement additional client applications in 2006 and beyond.”

ZeroNines patent pending Data Authorization Manager Appliance has protected the MyFailSafe Email portal running simultaneously in California, Colorado, and Florida for 16 months without a single disruption in service, despite occasional network failures and an outage in Florida resulting from Hurricane Charlie.

Gin added, “The ZeroNines FailSafe architecture provides seamless application availability, displacing the need for reactive fail-over and recovery solutions. We are able to provide the highest level of availability without modification to existing customer applications. We look forward to working with Sequiam in 2006 to create additional security applications requiring virtual 100% uptime.”

- End -

## **About ZeroNines®**

ZeroNines was founded in 2000 to develop and deploy proprietary MultiSynchronization information security and availability solutions to empower customers with a new business continuity standard: true 24 x 7 access to valued applications and content. ZeroNines' technology leverages and maximizes customers' current processing and storage infrastructure by operating agnostically across multiple platforms, thereby shifting the paradigm from reactive disaster recovery to proactive business continuity.

ZeroNines® is a USA-based company with headquarters in Denver, Colorado. The primary target customer base includes Global 2000 companies. It offers enterprise infrastructure assessment, program and project management implementations.

"Securing A World without Downtime™" is the company's vision. ZeroNines® solutions will enable business continuity to the masses in an affordable manner allowing our clients to determine the level of availability they require thus ensuring access to critical data without making changes to their existing infrastructure.
